This catalogue covers MPE's range of filters for use with DC power lines, AC power lines and specialist applications. These filters are to be used to remove electromagnetic interference (EMI) and unintentional transmissions from the following power supplies:

- Single line d.c.
- Two line d.c.
- Single line a.c.
- Two phase a.c.
- Single phase & neutral
- Three phase & neutral
- 400Hz

These designs offer extensive low pass suppression of common mode and differential mode EMI, using passive multi-stage components.

Construction

All capacitors are wound in house and use metallised high-grade polypropylene or polyester film. This film attains low power losses and a dielectric self-healing capacity. Our feedthrough capacitor technology provides frequency performance of 100dB of attenuation up to 10GHz and beyond. Single line filters offer multi-stage circuits with performance measured at full load conditions. Multi-line filters incorporate a high permeability current compensating inductor. This inductor again achieves low losses, reduces size & weight and maintains full frequency performance under all load conditions.

The filter components are housed in a compartmentalised, fully RF sealed enclosure. To maintain shielding effectiveness the enclosure is supplied complete with access lids, screws and a set of EMI / environmental gaskets.

Reliability & Service Life

Many products listed in this catalogue have been electrically re-tested after more than 30 years of continuous service. They have been found not to exhibit any signs of safety or performance degradation, endorsing the claims of high reliability. Customer returns of filters within this catalogue due to electrical problems have been less than 0.1% over a 30 year period.

Approvals

Our production process requires that 100% of filters are tested under ISO9001:2015 controls before dispatch.

Filter safety requirements to UL1283, LVD 2014/35/EU and UK Electrical Equipment (Safety) Regulations 2016.

Filter performance measured using Mil-F-15733, Mil-Std-220C and CISPR17:2011/BS EN 55017:2011.

All filters in this catalogue are compliant with RoHS 2011/65/EU and UK RoHS Regulations 2012.

All filters in this catalogue are proof voltage tested between each live line and earth. For multi-line filters, they are also tested between live lines. Proof voltage tests are conducted at multiple stages of the product manufacturing process.

Earth Bonding for Performance

It is important to achieve as low as possible earth bond impedance to the unpainted base or mounting flange of the filter. We normally recommend that filters be mounted on a steel surface, which has been electroplated with tin or zinc. This should be unpainted and must be flat and smooth. This type of large area connection to the box ensures that at high frequencies, inductive and capacitive values are kept small allowing a clear path to ground potential.

Earth Bonding for Safety

The installer must ensure the filter is permanently & solidly earthed. This is essential for filters with direct capacitance from phase to metal enclosure. In the event of the earth connection to the enclosure becoming disconnected, the enclosure will rise in voltage to an unsafe level. Low leakage filters are safer in this respect not having any direct capacitance (Y2) between phase and earth, and can be found in a separate MPE Power Line catalogue.

Discharging after Isolation

All filters in this catalogue contain large values of capacitance. These capacitors can store a hazardous electrical charge long after the power has been removed. Therefore as a safety measure, all filters are fitted with internal discharge resistors intended to lower the stored voltage to a safe level after removal of the power.

It is important to follow a safe disconnection procedure when working on cables and filters. Always insure the voltage between phases, between phase and neutral, and between phase and ground are safe before working on any part of the cabling connected to a filter.

Description

Single line DC power line filters packaged in a tubular case designed for bulkhead mounting. The construction style provides high performance filtering in a high packing density. Suitable for voltages up to 250VDC, they are often utilised in military power supplies where their high current ratings and high performance are very beneficial. The filters offer 100dB attenuation against electromagnetic noise present on the power lines from a frequency range of 500kHz to 10GHz.

Typical Applications

- Military power supplies
- IT & Telecomms, base stations, server supplies & racks
- Screened rooms & EMC test chambers
- Mobile shelters
- Supports compliance to MIL-STD-461 & DEF STAN 59-411

Insertion Loss Performance

Asymmetric attenuation shown as measured in 50Ω system, at all loading conditions, in accordance with CISPR-17.

Performance curve meets 100dB from 500kHz to 10GHz.

Technical Specification

Rated Voltage	250VDC
Alternative Voltage	Also suitable for 100VAC 50Hz (Alternative surge arrestors may be required)
Rated Current	6A to 200A (see table)
Current Overload	10 x maximum rated current for 1 second 1.5 x max rated current for 10 minutes
Discharge time	Max. 30 seconds to below 34V (filter incorporates discharge resistors)
Temperature Rise	25°C on filter case at full load
Storage Temperature Range	-45°C to +85°C
Operating Temperature Range	-45°C to +50°C
MTBF	>1.5 million hours (calculated using Mil Hdbk 217F)
Surge Suppression (optional)	300VDC at 130J (8/20μs) All filters can be supplied with a leaded metal-oxide varistor fitted between the input terminal and earth (case).

Range Available

Rated Current (A)	Part Number	Volt Drop (mV)	Major Dimensions			Approx. Weight (kg)
			Case Length A (mm)	Overall Length L (mm)	Terminal Size W	
6	DS26384	325	165	245	M6	1.2
10	DS26385	200	180	260	M6	1.2
32	DS26386	200	195	275	M6	1.5
63	DS26387	200	215	295	M6	1.5
100	DS26388	125	195	290	M8	1.8
200	DS26389	125	195	300	M10	1.8

Mechanical Details

Terminal Conductor	Brass spindles (bright nickel plated)
Enclosure Material	Brass case (bright nickel plated)
Potting Compound	Epoxy based resin
Potting Compound Flammability Rating	UL94 V-0
Finish	Gloss epoxy paint to DEF-STAN 80-161
Colour	Light admiralty grey BS 381C 697
Mechanical Fixing	M30 gland fixed with washer and nut (supplied)

Ordering Code

The filter ordering codes consist of the part number and an optional surge suppressor suffix.

DS26384#

Select the required filter part number from the range available (example shown)

Leave blank for no surge protection
Add suffix "V" for surge protection

Installation

The filter requires a solid low impedance connection between the case and potential earth. For full installation instructions, please see separate application note.

Description

Single line DC power line filters packaged in a rectangular case designed for bulkhead mounting. They are suitable for voltages up to 250VDC. The filters offer 100dB attenuation against electromagnetic noise present on the power lines from a frequency range of 10kHz to 10GHz.

Typical Applications

- Military power supplies
- IT & Telecomms, base stations, server supplies & racks
- Screened rooms & EMC test chambers
- Supports compliance to MIL-STD-461 & DEF STAN 59-411

Insertion Loss Performance

Asymmetric attenuation shown as measured in 50Ω system, at all loading conditions, in accordance with CISPR-17.

Performance curve meets 100dB from 10kHz to 10GHz.

Technical Specification

Rated Voltage	250VDC
Alternative Voltage	Also suitable for 100VAC 50Hz (Alternative surge arrestors may be required)
Rated Current	32A to 200A (see table)
Current Overload	10 x maximum rated current for 1 second 1.5 x max rated current for 10 minutes
Discharge time	Max. 60 seconds to below 34V (filter incorporates discharge resistors)
Temperature Rise	25°C on filter case at full load
Storage Temperature Range	-45°C to +85°C
Operating Temperature Range	-45°C to +50°C
MTBF	>0.8 million hours (calculated using Mil Hdbk 217F)
Surge Suppression (optional)	330VDC at 130J (8/20μs) All filters can be supplied with a leaded metal-oxide varistor fitted between the input terminal and earth (case).

Range Available

Ordering Code

The filter ordering codes consist of the part number, a conduit hole suffix and an optional surge suppressor suffix.

Installation

Please see page 27 for bulkhead penetration kits and fixing screw kits.

The filters require a solid low impedance connection between the case and potential earth. For full installation instructions, please see separate application note.

Description

Two line DC power line filters feature a combination of feedthrough capacitors with high permeability toroidal current compensating inductors for high performance filtering in a small rectangular case, designed for mounting on a bulkhead. To achieve the full benefits of this design, it is important that the load current returns through the filter. They are suitable for voltages up to 250VDC. The filters offer 100dB attenuation against electromagnetic noise present on the power lines from a frequency range of 10kHz to 10GHz.

Typical Applications

- Military power supplies
- UPS, inverters & converters
- IT & Telecomms, base stations, server supplies & racks
- Screened rooms & EMC test chambers
- Supports compliance to MIL-STD-461 & DEF STAN 59-411

Insertion Loss Performance

Asymmetric attenuation shown as measured in 50Ω system, at all loading conditions, in accordance with CISPR-17.

Performance curve meets 100dB from 10kHz to 10GHz.

Installation

The filters require a solid low impedance connection between the case and potential earth. For full installation instructions, please see separate application note.

Description

Single line AC power line filters packaged in a rectangular case designed for bulkhead mounting. Suitable for voltages up to 250VAC 50/60Hz, they are particularly suited to high current power and control line applications where the return current has to return via a different route. The filters offer 100dB attenuation against electromagnetic noise present on the power lines from a frequency range of 10kHz to 10GHz.

Typical Applications

- Military power supplies
- IT & Telecomms, base stations, server supplies & racks
- Screened rooms & EMC test chambers
- Supports compliance to MIL-STD-461 & DEF STAN 59-411

Insertion Loss Performance

Asymmetric attenuation shown as measured in 50Ω system, at all loading conditions, in accordance with CISPR-17.

The filter ordering codes consist of the part number, a conduit hole suffix and an optional surge suppressor suffix.

Installation

Please see page 27 for bulkhead penetration kits and fixing screw kits.

The filters require a solid low impedance connection between the case and potential earth. For full installation instructions, please see separate application note.

Description

This range of filters was specifically designed to provide optimum high performance filtering on special two line mains supplies where neither line is tied to neutral. They are suitable for voltages up to 250VAC 50/60Hz phase to earth and 440VAC 50/60Hz phase to phase. They feature a combination of feedthrough capacitors with high permeability toroidal current compensating inductors for high performance filtering in a small rectangular case, designed for mounting on a bulkhead. The filters offer 100dB attenuation against electromagnetic noise present on the power lines from a frequency range of 100kHz to 10GHz.

Typical Applications

- Marine generator supplies
- Two phases derived from a three phase supply
- Transformer isolated supplies
- Supports compliance to MIL-STD-461 & DEF STAN 59-411

Insertion Loss Performance

Asymmetric attenuation shown as measured in 50Ω system, at all loading conditions, in accordance with CISPR-17.

Performance curve meets 100dB from 100kHz to 10GHz.

Technical Specification

Rated Voltage	250VAC 50/60Hz phase to earth 440VAC 50/60Hz phase to phase
Alternative Voltage	Also suitable for 480VAC 50/60Hz phase to phase Also suitable for two line d.c. supplies up to 600VDC (Alternative surge arrestors may be required)
Rated Current	16A to 200A (each individual line, see range available)
Current Overload	10 x maximum rated current for 1 second 1.5 x max rated current for 10 minutes
Discharge time	Max. 30 seconds to below 34V (filter incorporates discharge resistors)
Temperature Rise	25°C on filter case at full load
Storage Temperature Range	-45°C to +85°C
Operating Temperature Range	-45°C to +50°C
MTBF	>0.5 million hours (calculated using Mil Hdbk 217F)
Surge Suppression (optional)	275VAC at 140J (8/20μs) All filters can be supplied with a metal-oxide varistor fitted between the input terminal and earth (case).

Ordering Code

The filter ordering codes consist of the part number, a conduit hole suffix and an optional surge suppressor suffix.

Installation

Please see page 27 for bulkhead penetration kits and fixing screw kits.

The filter requires a solid low impedance connection between the case and potential earth. For full installation instructions, please see separate application note.

Description

The CleanPower range of filters for electrical connection to SP&N and TP&N mains distribution systems, are designed for use in industrial applications or EMC installations where very high frequency performance is not required. The filters are housed in a rugged stainless steel rectangular case, designed for mounting on a bulkhead. The filters offer 100dB attenuation against electromagnetic noise present on the power lines from a frequency range of 100kHz to 1GHz.

Typical Applications

- Industrial power and equipment supplies
- Screened rooms, enclosures, cabinets and server supplies
- Supports compliance to MIL-STD-461 & DEF STAN 59-411

Insertion Loss Performance

Asymmetric attenuation shown as measured in 50Ω system, at all loading conditions, in accordance with CISPR-17.

Performance curve meets 100dB from 100kHz to 1GHz.

Technical Specification

Rated Voltage	SP&N Filters	250VAC 50/60Hz
Alternative Voltage	SP&N Filters	Also suitable for 520/300VAC 50/60Hz two phase Also suitable for 2 line d.c. supplies up to 400VDC (Alternative surge arrestors may be required)
Rated Voltage	TP&N Filters	440/250VAC 50/60Hz
Alternative Voltage	TP&N Filters	Also suitable for 480/277VAC 50/60Hz Also suitable for 520/300VAC 50/60Hz (Alternative surge arrestors may be required)
Rated Current		16A to 160A (each individual line, see range available)
Current Overload		10 x maximum rated current for 1 second 1.5 x max rated current for 15 minutes
Discharge time		Max. 30 seconds to below 34V (filter incorporates discharge resistors)
Temperature Rise		20°C on filter case at full load
Storage Temperature Range		-45°C to +85°C
Operating Temperature Range		-45°C to +50°C
MTBF		>0.2 million hours (calculated using Mil Hdbk 217F)
Surge Suppression (optional)		320VAC at 255J (8/20μs) All filters can be supplied with a metal-oxide varistor fitted between the input terminal and earth (case).

Range Available

Mechanical Details

Terminal Conductor	Brass spindles (bright nickel plated)
Enclosure Material	Ferromagnetic stainless steel
Potting Compound	Polyurethane based resin
Potting Compound Flammability Rating	UL94 V-0
Finish	Natural, dressed
Enclosure Rating	IP44
Mechanical Fixing	Mounting hole provisions in input and output compartments (Mounting hardware supplied separately – see page 27)

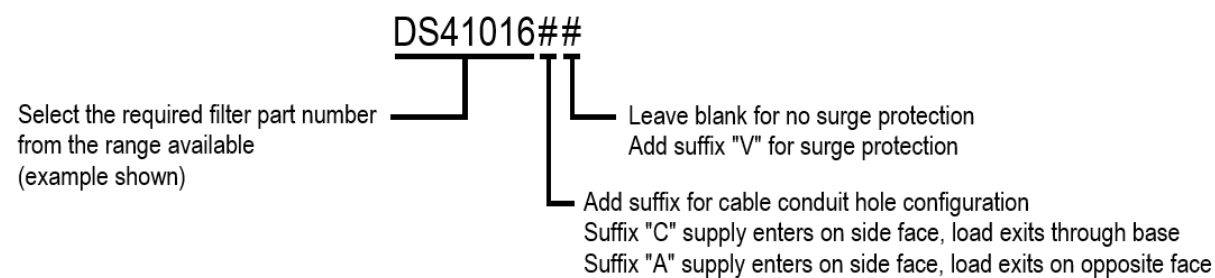

Earth Leakage

Measurement taken from phase to earth at 250V 50Hz.

Important, all filters in this catalogue can NOT be protected by a standard 30mA residual circuit breaker (RCCB). However, a RCCB protection device can be placed down line / load side of filter (see separate application note).

Ordering Code

The filter ordering codes consist of the part number, a conduit hole suffix and an optional surge suppressor suffix.

Installation

Please see page 27 for bulkhead penetration kits and fixing screw kits.

For full installation instructions, please see separate application note.

Description

This range of filters has been specifically designed for use on 400Hz systems and utilises capacitors with low loss dielectric material to minimise heat dissipation. By using coupled choke designs, it has been possible to provide a good performance with comparatively low capacitance values and hence reactive current. However, it must be noted that at 400Hz, reactive current can be significant and this current has to be supplied by the generator as well as the load current. The filters offer 100dB attenuation against electromagnetic noise present on the power lines from a frequency range of 100kHz to 10GHz.

Many 400Hz supplies have high levels of harmonic content. This can cause additional heating within filters, so if this is known to be the case, it is better to select a filter of higher current rating than would otherwise be required.

Typical Applications

- Military power supplies
- Aircraft ground power supplies
- 400Hz computer power supplies
- Supports compliance to MIL-STD-461 & DEF STAN 59-411

Insertion Loss Performance

Asymmetric attenuation shown as measured in 50Ω system, at all loading conditions, in accordance with CISPR-17.

Performance curve meets 100dB from 100kHz to 10GHz.

Technical Specification

Rated Voltage	SP&N Filters	115VAC 400Hz
	TP&N Filters	200/115VAC 400Hz
Rated Current	32A to 200A (each individual line, see range available)	
Current Overload	10 x maximum rated current for 1 second	
	1.5 x max rated current for 10 minutes	
Discharge time	Max. 30 seconds to below 34V (filter incorporates discharge resistors)	
Temperature Rise	25°C on filter case at full load	
Storage Temperature Range	-45°C to +85°C	
Operating Temperature Range	-45°C to +50°C	
MTBF	>0.3 million hours (calculated using Mil Hdbk 217F)	
Surge Suppression (optional)	150VAC at 100J (8/20μs)	
	All filters can be supplied with a metal-oxide varistor fitted between the input terminal and earth (case).

BULKHEAD PENETRATION KITS

Optional bulkhead penetration kits can be provided for rectangular case style filters. The tube thread size should be chosen to match the pre-pierced end compartment conduit holes.

These high quality bulkhead penetration kits have been designed to provide an RFI tight bulkhead penetration for cables to facilitate fixing of rectangular filters to bulkheads or walls of shielded enclosures. They make it easier to achieve a full RFI seal between filter case and bulkhead up to the highest frequencies, which is not usually achievable with standard electrical conduit fittings due to badly fitting threads.

The bulkhead penetration kits can be used with a bulkhead thickness up to 20mm. They comprise a penetration tube complete with nuts, heavy duty washers, RF gaskets, and end bushes for cable protection. The main components are made from electroplated steel and the RF gaskets are made from copper sheet.

Part Number (Kits for use with Bulkhead Thickness of up to 20mm)	Cable Entry Hole Diameter (mm)	Conduit Thread Size
807146	16	M16
807147	20	M20
807148	25	M25
807149	32	M32
807150	40	M40
807151	50	M50
807152	63	M63

MPE

FIXING SCREW KITS

Optional fixing screw kits can be provided for rectangular case style filters. The screw thread size should be chosen to match the pre-pierced end compartment fixing holes.

Fixing screw kits enable the filter to be securely fastened to the mounting surface. They can be used with a mounting surface thickness up to 20mm. They comprise a set of four screws each with washers, spring washers, nuts and lock nuts and are all made from electroplated steel with the exception of the spring washers which are stainless steel.

Part Number (Kits for use with Mounting Surface Thickness of up to 20mm)	Fixing Hole Diameter (mm)	Screw Thread Size
806952	7	M6
806953	9	M8
806954	11	M10
806955	13	M12
806956	17	M16

CABLE ENTRY OPTIONS

Rectangular case style filters can be supplied with different cable entry hole positions to suit alternative mounting arrangements. The cable entry option can be identified by the suffix in the part number. See the illustrations below showing the standard cable entry positions. For alternative entry options as well as un-pierced boxes please contact sales@mpe.co.uk

Configuration "A"
e.g. Part Number DS23332A
End Entry / End Exit

Configuration "C"
e.g. Part Number DS23332C
End Entry / Base Exit

OTHER PRODUCTS FROM MPE

MPE have designed and manufactured EMC solutions in the UK for over 95 years and have a proud reputation as one of the world's leading capacitor and filter specialists.

With a proven heritage of design, development and manufacture of high performance capacitors and filters, MPE are the first choice for companies who require the most cost effective EMC solution, quality products and technical support.

MPE's unrivalled capability and experience of many defence, telecoms, industrial and commercial applications enables MPE to supply capacitors and filters to satisfy the most exacting customer requirements from military vehicles, IT servers and telecoms base stations to EMP, NEMP, LEMP, HEMP and TEMPEST commercial and military installations.

MPE's comprehensive standard product range includes high performance feedthrough capacitors to high current power, telephone, data and control line filters with wide frequency spectrum characteristics in a choice of enclosure styles:

-  Audio, Public Address & Building Management Services Filters
-  Control Line Filters
-  Data Line Filters
-  Equipment Filters
-  Feedthrough Capacitors & Filters
-  High Voltage DC Power Line Filters – 1500VDC
-  HEMP Control Line Filters
-  HEMP Public Address Filters
-  HEMP Power Line Filters
-  HEMP Power Line Filters – Modular Option
-  HEMP Telephone Line Filters
-  Low Leakage TEMPEST EMI Filters
-  Military Vehicle Filters
-  Power Line Filters
-  Specialist EMI Power Line Filters
-  Telephone Line Filters
-  TEMPEST Pluggable EURO Filters
-  TEMPEST Pluggable UK Filters
-  Ultra Low Leakage Power Line Filters
